From your backup to your Twin iPhone

LEVEL 1

Your private account

Start on the website or in the iOS app. Open your invitation and sign in with your passkey. Your profile, phone assignment and receipts belong to this account.

LEVEL 2 → LEVEL 3

Bring your backup

Make an encrypted computer backup in Finder or Apple Devices. ZIP the whole folder and upload it once. At Level 2, build your profile. At Level 3, release that same backup for your assigned iPhone.

Resume an interrupted upload with the same ZIP. A completed upload is held for seven days. Keep your original and its password.

LEVEL 3 · ALTERNATIVE

Ship your iPhone

Choose the shipped-phone option in your account. Include your handoff reference when you send the configured iPhone with Twin installed. The workstation matches the reference to its wired enrollment.

Only have an iCloud backup? Restore it on the iPhone in Apple's Setup Assistant. Then ship the configured phone or make a computer backup.

SAME ACCOUNT

Your assigned iPhone

The workstation checks the backup and matched device before restore. Your account distinguishes a tool-reported result, an outcome that needs checking, and an operator-confirmed restore.

iOS app

Open **Set up your iPhones** to manage the handoff, share the private setup link to your computer, or prepare a status message.

Connected accounts

Connect Gmail or Outlook in your private account. Full Auto Pass can open an enrolled Mac sign-in. Bank testing uses Plaid Sandbox.

Linked iMessage

Text **Backup status** for progress, **Twin setup** for the handoff, or **Connect accounts** for providers. A saved reminder has its own receipt.
